

MODEL (B)

Q.1 Write What You Know About PHP And Why We Use it?

PHP is a popular server-side scripting language used for web development. The acronym PHP originally stood for "Personal Home Page," but it now stands for "PHP: Hypertext Preprocessor." PHP is primarily designed for creating dynamic web pages and applications.

PHP is case-insensitive create in 1994 by Rasmus

1. Server-side scripting
2. Wide community and resources
3. for dynamic web development
4. To connect to databases
5. Scalability and Versatility

Q.2 How PHP Works?

PHP is a server-side language. This means that the code you write in PHP sits on a host computer called a server. The server sends Web pages to the requesting visitors, when a visitor goes to a Web site written in PHP, the server reads the PHP code and then processes it according to its scripted directions.

Q.3 What are Variables in PHP, List Down The Variables Naming Syntactical Rules?

Variables are containers used to temporarily store values.

A.5 syntactical rules:

- A variable's name must start with a dollar sign (\$)
- The variable's name can contain a combination of letters, numbers, and the underscore,
- The first character after the dollar sign must be a letter or an underscore
- Variable names in PHP are case-sensitive.

Q.4 What is Constant in PHP, How To Create it and How To Print it?

A.4 Constants are like variables, are used to temporarily store a value but Constants its value cannot be changed during run-time.

to create a constant, you use the define() function: define ('NAME', value);

to print it: echo 'Hello, ' . USERNAME;

Q.5 What (List) is Super Global Arrays in PHP Write More About one of Them?

A.5 They are predefined arrays in PHP.

They are: \$_GET, \$_POST, \$_REQUEST, \$_SERVER, \$_ENV, \$_SESSION, and \$_COOKIE

The \$_GET variable is where PHP stores all of the values sent to a PHP script via the GET method

The \$_POST stores all of the data sent to a PHP script from an HTML form that uses the POST method.

Multi_Answer

Php is an HTML-embedded scripting language
